

Narrowing this down to 5 (...6) is really tough.

- Get a better handle on my library's policies – I find the privacy policy on our website rather incomplete so wonder what I'm missing. I'm especially curious about the parts of our system that are centralized/controlled through the county – our wifi and tech, for instance, all comes through the county's IT office, so the library doesn't have complete control over it.
- Incorporate what we learn into the advocacy, support and training re: privacy that the Maryland Library Association's Intellectual Freedom Panel provides (I'm part of the panel so have an in)
- Develop training/scripts/a set of tools focused on helping my library's low tech-literacy patrons protect their privacy (well, everyone, but especially them given often greater vulnerabilities)
- Develop tactics to get privacy concerns about/within my library system taken more seriously – possibly an informal group of system-wide privacy advocates?
- Make active connections with other privacy advocates - in the region and further, and in libraries and beyond (in addition to this group, of course!)
- Extra: present about these issues at MLA (or beyond!) (I have already been told I have to propose a presentation, so the trick is coming up with a presentation I'm proud of.)
